Engineering & Technology Consulting

BEFORE WE TALK

Let’s shape your Mendix project.

For companies that already use Mendix or have decided to use it. Bring the business problem; we’ll discuss the right scope and a useful next step.

Start with an assessment. Or start building.

An assessment can review an existing app, investigate a specific performance issue, or clarify what to build next. You receive findings and prioritized recommendations; implementation is scoped separately.

PROJECT SIZES	Typical investment and illustrative scope
XS **$5k–$10k**	**Assess, train, or build something focused.** A focused app assessment, targeted performance review, certification preparation, or a simple form / single fixed flow.
S **$10k–$50k**	**Connect a workflow.** A departmental request-and-approval app with a few roles, basic reporting, and several straightforward integrations.
M **$50k–$100k**	**Handle rules, systems, and mobile browsers.** A responsive web app for desktop and mobile, dynamic approvals, and moderately complex integrations, such as data transformation or two-way sync.
L **$100k–$300k**	**Coordinate work across teams.** A substantial application with several workflows, distinct personas and permissions, and multiple integrations.
XL **$300k+**	**Deliver a phased program or native mobile app.** Broader applications with staged rollouts, or native iOS and Android apps with device features, offline workflows, and Apple App Store / Google Play releases.

Examples are guides, not fixed packages. Mobile requirements, integration complexity, user roles, data, and rollout needs determine the final scope and price.

Bring to our conversation

The process you want to improve, your current Mendix setup, who will use the app, systems it must connect to, and any budget or deadline. A concrete example is enough.

Consulting: $250/hour | Projects: agreed scope and fixed price
